

## EU Knowledge Valorisation Talks 2024

### Aspects that will be considered to select best practices for a presentation

#### Innovativeness

The practice stands out due to a novel approach, for example in terms of design of the measure, involvement of stakeholders or tools developed.

#### Cross-sector collaboration

The practice is characterised by a particularly comprehensive cross-sectoral approach with the involvement of various types of actors.

#### Impact, scalability and replicability

The practice credibly demonstrates a sustainable impact on knowledge valorisation and can be replicated; **OR** the pilot phase indicates a potential for sustainable impact and the possibility of scalability and/or replication in different settings. The focus is on the extent of the positive change or reform (game changer?), if possible underpinned by measurable indicators.

The final selection of best practices for the EU Knowledge Valorisation Talks 2024 will also consider other criteria to ensure a well-balanced programme, in particular geographical and gender balance and diversity of stakeholder participation.
