

## **Agenda Innovation UA-UE**

Document de travail

Version du 14 février 2022

## 1. CONTEXTE POLITIQUE

Le renforcement de la coopération en matière de recherche et d'innovation (R&I) entre l'Union africaine (UA) et l'Union européenne (UE) est une priorité essentielle, car la R&I contribue à renforcer une croissance économique durable et inclusive et la création d'emplois, réduisant ainsi la pauvreté et les inégalités. Cela est énoncé dans d'importantes décisions politiques, telles que les objectifs de développement durable (ODD) figurant dans le programme des Nations unies (ONU) à l'horizon 2030<sup>1</sup>, l'agenda 2063 de l'UA<sup>2</sup>, la stratégie en matière de science, de technologie et d'innovation pour l'Afrique (STISA 2024)<sup>3</sup>, la stratégie de transformation numérique pour l'Afrique 2020-2030 de la CUA<sup>4</sup> et les communications de l'UE sur la « Stratégie globale avec l'Afrique »<sup>5</sup> et « l'Approche Globale de la R&I »<sup>6</sup>.

Lors de la première réunion ministérielle sur la R&I du dialogue politique de haut niveau UA-UE sur la science, la technologie et l'innovation de<sup>7</sup> (HLPD sur les STI), il a été convenu de se concentrer sur les efforts de coopération dans quatre domaines prioritaires, à savoir: **la santé publique, la transition verte, l'innovation & la technologie et les capacités pour la science**. Les ministres sont également convenus de commencer à élaborer un **agenda d'innovation commun UA-UE**.

Les ministres de l'UA et de l'UE ont évoqué l'énorme **potentiel de croissance** des écosystèmes d'innovation tant dans l'UA que dans l'UE, qui se développent actuellement à un rythme rapide. Mais des efforts supplémentaires pourraient être consentis pour améliorer les performances, les capacités et les compétences en matière d'innovation sur les deux continents. Les efforts stratégiques devraient être orientés conjointement vers la création ou le renforcement d'éléments clés d'écosystèmes d'innovation plus efficaces et plus ciblés. Le nouveau paradigme de la coopération UA-UE en matière de R&I est de produire des effets tangibles sur le terrain grâce à la recherche dans laquelle les investissements conjoints sont réalisés.

Le présent agenda d'innovation UA-UE propose donc **des objectifs spécifiques assortis d'actions à court, moyen et long termes** pour les quatre domaines prioritaires du HLPD approuvés par les ministres en juillet 2020. Une discussion a eu lieu et la version de travail actuelle de l'agenda a été approuvée lors de la réunion des hauts fonctionnaires du HLPD UA-UE qui s'est tenue le 27 janvier 2022, avant que les travaux sur l'agenda ne soient reconnus lors du **6ème sommet UA-UE 2022** des chefs d'État et de gouvernement. La mise en œuvre de l'agenda commun s'appuiera sur l'expérience et les réseaux d'activités de R&I antérieures et en cours, ainsi que sur des propositions d'actions supplémentaires et sur les besoins de financement correspondants. Certaines d'entre elles pourraient être couvertes par les programmes de travail bisannuels d'Horizon Europe<sup>8</sup>, les programmes indicatifs pluriannuels régionaux et nationaux de l'instrument de voisinage, de coopération au développement et de coopération internationale (NDICI) — Europe dans le monde, le Fonds Européen pour le Développement Durable Plus (FEDD +) et d'autres programmes pertinents UA-UE.

<sup>4</sup> CUA. Stratégie de transformation numérique pour l'Afrique 2020-2030 [38507-doc-dts - french.pdf](https://au.int/38507-doc-dts-french.pdf) ([au.int](https://au.int))

<sup>5</sup> Commission européenne (CE) et le Haut représentant de l'Union pour les affaires étrangères et la politique de sécurité. Communication conjointe au Parlement européen et au Conseil. Vers une stratégie globale avec l'Afrique. Bruxelles, le 9.3.2020. JOIN (2020) 4 final. <https://eur-lex.europa.eu/legal-content/FR/TXT/PDF/?uri=CELEX:52020JC0004>

<sup>6</sup> CE. Stratégie de coopération internationale de l'Europe dans un monde en mutation. Communication de la Commission au Parlement européen, au Conseil, au Comité économique et social européen. Comité et Comité des régions sur l'approche globale de la recherche et de l'innovation. Bruxelles, le 18.5.2021. COM (2021) 252 final [Communication on the Global Approach to Research and Innovation | Commission européenne \(europa.eu\)](https://ec.europa.eu/info/research-and-innovation/strategy/strategy-2020-2024/europe-world/international-cooperation/eu-africa-cooperation_en)

<sup>7</sup> Coopération UE-Afrique dans le domaine de la recherche et de l'innovation, Commission européenne (europa.eu). [https://ec.europa.eu/info/research-and-innovation/strategy/strategy-2020-2024/europe-world/international-cooperation/eu-africa-cooperation\\_en](https://ec.europa.eu/info/research-and-innovation/strategy/strategy-2020-2024/europe-world/international-cooperation/eu-africa-cooperation_en)

<sup>8</sup> Y compris par l'association éventuelle de pays tiers à Horizon Europe

En outre, plusieurs États membres de l'UE<sup>9</sup> ont manifesté leur intérêt à accroître leur soutien à la coopération UA-UE dans le domaine des STI dans les pays africains et à contribuer à la mise en œuvre de cet Agenda Innovation UA-UE. Il en va de même pour leurs homologues de l'UA.

La collaboration dans le cadre de l'agenda d'innovation UA-UE doit se faire en collaboration avec l'UA et les institutions de l'UE, avec leurs États membres, ainsi qu'avec un large éventail de parties prenantes, telles que le secteur privé, les entreprises (industries), les institutions de recherche publiques et privées et les établissements d'enseignement supérieur. Il est essentiel de tirer parti du dividende démographique pour donner les moyens d'agir à la jeunesse, qui, grâce à l'esprit d'entreprise, promeut et met en œuvre de plus en plus d'innovations radicales. Une **consultation des parties prenantes** a été lancée lors du forum des entreprises UE-Afrique du 14 février et se poursuivra au cours de l'année 2022 afin de renforcer les actions proposées. Une **deuxième réunion ministérielle UA-UE sur la R&I en 2023**, permettrait d'adapter l'agenda là où ce sera nécessaire, y compris en ce qui concerne sa mise en œuvre, et de parvenir à un accord formel sur la **version finale de l'agenda d'innovation**.

## 2. OBJECTIFS

Un groupe de travail conjoint du HLPD UA-UE sur les STI a fait le point sur les activités conjointes de R&I<sup>10</sup>, antérieures et en cours, les résultats et les enseignements tirés du projet pilote de partenariat d'innovation Afrique-Europe<sup>11</sup> les avis du groupe consultatif UA-UE sur la R&I,<sup>12</sup> sur les discussions qui ont eu lieu lors de la réunion ministérielle UE-UA R&I de 2020, et l'exercice pilote de « mapping » des projets du partenariat UE-UA pour la R&I sur la sécurité alimentaire et nutritionnelle et l'agriculture durable<sup>13</sup>, ainsi que les progrès réalisés dans le cadre du partenariat R&I sur le changement climatique et l'énergie durable (CCSE), y compris en ce qui concerne la résilience au changement climatique et l'adaptation au changement climatique. Il a également été tenu compte du recensement des lacunes et des besoins dans le domaine de la numérisation, qui ont donné lieu aux recommandations clés du groupe de travail UA-UE sur l'économie numérique et à des initiatives telles que le pôle D4DHUB. Un certain nombre de besoins et de lacunes de la coopération en matière d'innovation ont été recensés et utilisés pour élaborer un ensemble distinct d'objectifs pour l'agenda d'innovation UA-UE, en tenant compte des conditions différentes entre les continents et les pays.

Les résultats de l'analyse des besoins et des lacunes ont permis de recenser cinq domaines: **a) l'écosystème de l'innovation b) la gestion de l'innovation, c) l'échange de connaissances, y compris le transfert de technologie, d) l'accès au financement et e) le développement des capacités humaines**. Les détails de l'analyse figurent à l'annexe II du présent agenda d'innovation UA-UE.

Afin de se pencher sur l'analyse des résultats, le groupe de travail a examiné et formulé les **objectifs** suivants de l'agenda, sur la base des principes de cocréation et de copropriété, de durabilité et d'ouverture:

1. **Rendre les choses réelles:** Traduire les capacités et les réalisations en matière d'innovation des chercheurs de l'UA et de l'UE dans les secteurs public et commercial, y compris les pôles technologiques et d'innovation, les entités publiques et privées à but non lucratif, telles que les organisations de la société civile et les particuliers, directement en résultats tangibles,

<sup>12</sup> CE. Coopération UE-Afrique dans le domaine de la recherche et de l'innovation, Commission européenne (europa.eu). [https://ec.europa.eu/info/research-and-innovation/strategy/strategy-2020-2024/europe-world/international-cooperation/eu-africa-cooperation\\_en](https://ec.europa.eu/info/research-and-innovation/strategy/strategy-2020-2024/europe-world/international-cooperation/eu-africa-cooperation_en)

<sup>13</sup> Voir annexe III.

soutenant ainsi une croissance et des emplois durables, en particulier pour les jeunes. Assurer une coopération étroite entre l'UA et l'UE afin de réaliser conjointement les ODD, en accordant une attention particulière au travail décent et à la croissance (ODD 8), à l'industrie, à l'innovation et aux infrastructures (ODD 9) et à la lutte contre les effets du changement climatique (ODD 13).

2. **Générer un impact dès la conception:** Favoriser et/ou renforcer les écosystèmes d'innovation afin de renforcer l'impact socio-économique sur le terrain grâce à l'échange de connaissances, notamment les transferts de technologies, d'expérience et de ressources humaines entre et au sein de l'UA et des pays de l'UE.
3. **Renforcer les personnes, les communautés et les institutions:** Mettre en place des partenariats viables, durables et mutuellement bénéfiques dans les domaines de l'enseignement supérieur, de la recherche et de l'innovation entre l'UA et les pays de l'UE comme fondations d'économies et de sociétés résilientes de la connaissance, en prévenant ou en atténuant, entre autres, les effets des crises majeures.
4. **Apprendre, suivre et amplifier:** Développer les instruments susceptibles de faire progresser les programmes et projets déjà couronnés de succès entre l'UA et les partenaires de l'UE (bilatéraux ou multilatéraux), permettre et/ou de renforcer le triangle de la connaissance formé par l'éducation, la recherche et l'innovation, en accordant une attention particulière à la participation du public, à la transparence et à l'inclusion, principalement avec les jeunes, grâce à l'autonomisation des capacités, à la promotion des connaissances et à la promotion de l'esprit d'entreprise et de la cocréation, sans provoquer de fuite des cerveaux.

### 3. ACTIONS

Des actions sont proposées pour répondre aux besoins recensés à l'Annexe II pour chacune des quatre priorités du HLPD UE-UA: **Santé Publique, Transition Écologique, Innovation & Technologie et Capacités Scientifiques**. En outre, un ensemble d'actions couvrant toutes les priorités est inclus. La mise en œuvre de ces actions contribuera à la réalisation des objectifs de l'agenda dans des délais précis. Chaque action est liée à un ou plusieurs objectifs de cet Agenda Innovation, tels qu'indiqués par les nombres entre crochets [], et à un ou plusieurs domaines de besoins et de lacunes recensés (voir annexe II) selon <A, B, C, D et/ou E > pour chaque action.

Les actions à court terme représentent les activités de R&I à mettre en œuvre et produisant un impact dans les 3 ans suivant leur mise en œuvre. Les actions à moyen et long terme sont considérées comme produisant des résultats tangibles dans les années 3 à 6 et 6 à 10 ans respectivement. En outre, certaines actions seront continues pendant toute la durée de l'Agenda Innovation et au-delà, tandis que d'autres auront une durée fixe.

#### 3.1 Actions à court terme

##### 3.1.1) Questions transversales

- 1) Favoriser les liens et les réseaux entre les entreprises et les secteurs publics, y compris les partenariats public-privé (PPP), les organismes d'enseignement supérieur et de recherche, les institutions financières et les organisations de la société civile, grâce à la mise en place d'une plateforme consultative spécifique dans le cadre de l'Agenda Innovation UA-UE, en améliorant la qualité et l'efficacité des mesures améliorant les écosystèmes d'innovation. [1,2,3] < A >
- 2) Concevoir des mécanismes permettant d'associer de manière proactive les citoyens aux écosystèmes d'innovation, de stimuler la citoyenneté active afin de garantir une adoption plus efficace et plus rapide des résultats de l'innovation par la société, et d'exploiter leur intelligence créative et collective, tout en déployant des efforts efficaces pour combler l'écart entre les hommes et les femmes et éviter toute forme de discrimination. [2,3] < A >
- 3) Recenser et partager les pratiques en matière de résilience au changement climatique et d'adaptation au changement climatique lors des réunions consultatives, afin d'éviter le

verrouillage des trajectoires de développement et la lutte contre les incidences du changement climatique (ODD 13). [1,2,3,4] < B, C, E >

- 4) Encourager la participation de partenaires financiers, tels que les investisseurs providentiels (business angels), aux partenariats UA-UE afin d'améliorer conjointement l'accès à l'ingénierie financière innovante, y compris pour les entreprises en phase de démarrage et les jeunes pousses, favorisant ainsi l'adoption de nouveaux produits et services d'innovation. [1,4] < B, D >

### **3.1.2) Santé Publique**

- 1) Soutenir la transformation des résultats de la R&I dans le domaine de la santé en produits, orientations des politiques et services pertinents. [1,2] < B >
- 2) Élaborer des programmes communs d'innovation et de recherche sur les priorités en matière de santé, améliorer les bonnes pratiques et les normes communes dans les domaines de coopération sélectionnés et diffuser la disponibilité et l'utilisation des technologies clés génériques et émergentes (par exemple, la numérisation, les TIC, la robotique et l'IA) afin d'améliorer les performances et la résilience des systèmes de santé publique, qui se sont révélés extrêmement fragiles dans le cadre du «test de résistance» de la pandémie de COVID-19, qui seront également touchés par le changement climatique en cours. [1,2] < B, C, E >

### **3.1.3) Transition Écologique**

- 1) Développer ou transférer des dispositifs innovants de production et d'utilisation d'énergies renouvelables, adaptés à une adoption facile et rapide par les «communautés énergétiques», les «villages énergétiques» et/ou au niveau des ménages, avec un accès abordable et durable pour les territoires moins favorisés et les groupes moins favorisés, afin de prévenir la détérioration des environnements ruraux et d'améliorer les environnements urbains (villes intelligentes et vertes). [1,2] < B, C, E >
- 2) Soutenir le développement de services climatiques innovants au moyen d'une nouvelle action de «coopération dans le domaine de la science spatiale, de la technique et de l'innovation» pour la réduction des risques au niveau local et régional, fondée sur des réseaux in situ et à distance des changements climatiques et des effets du changement climatique, ainsi que sur les pratiques en matière de résilience et d'adaptation, conformément au manifeste de Lisbonne du Forum de haut niveau Europe-Afrique sur l'observation de la Terre de l'espace de juillet 2021. [1,2] < A, B, C, E >

### **3.1.4) Innovation et Technologie**

- 1) Soutenir la coopération en matière de recherche et d'innovation entre les organismes de recherche et les entreprises de l'Union africaine et de l'UE (en particulier les PME), de la faible technologie à la haute technologie (par exemple, l'innovation frugale, y compris l'innovation organisationnelle) en utilisant de manière intelligente l'intelligence locale et des modèles adaptés axés sur les entreprises, en mobilisant des approches multi-acteurs (plateformes d'innovation, laboratoires vivants, etc.) dans des secteurs tels que l'agroalimentaire, l'économie circulaire, la fabrication durable, le principe «Une seule santé», les matières premières, en utilisant la numérisation et l'intelligence artificielle comme facteurs transversaux. [3] < A, B, C, E >
- 2) Soutenir les pôles technologiques/d'innovation, les réseaux et les opérations des accélérateurs et incubateurs, y compris en évaluant les domaines technologiques qui pourraient bénéficier de la standardisation, afin de développer le capital humain et la mise en commun de compétences en vue d'un transfert de technologies efficace et de stimuler l'esprit d'entreprise, notamment au moyen de programmes d'échanges thématiques entre jeunes pousses, chercheurs et décideurs politiques, y compris l'innovation sociale au-delà des technologies. [1,3,4] < A, B, C, E >

### **3.1.5) Capacités Scientifiques**

- 1) Renforcer la coopération entre les établissements d'enseignement supérieur, les centres et les organismes de recherche de l'Union africaine et de l'UE, et renforcer les partenariats, en mettant l'accent sur le potentiel des activités de transfert de connaissances, de formation d'équipe, de jumelage et de mobilité à des fins d'apprentissage (par exemple, en associant les alliances universitaires européennes, les consortiums du programme Erasmus+ et le programme de mobilité universitaire en Afrique, et les bénéficiaires de subventions ARISE), en renforçant les possibilités de mobilité scientifique et universitaire (notamment au moyen des actions Marie Skłodowska-Curie), afin de soutenir la co-construction et/ou le renforcement des programmes de formation et des projets de recherche et d'innovation répondant aux besoins socio-économiques des pays/régions concernés, tant dans l'UA que dans l'UE. [3,4] < C, E >
- 2) Améliorer la transparence et la reconnaissance des qualifications de l'enseignement supérieur et la pertinence des programmes d'études, et améliorer la mobilité. Favoriser le développement de systèmes éducatifs numériques hautement performants et mettre à niveau les aptitudes et les compétences numériques pour la transformation numérique. [3,4] < E >

## **3.2 Actions à moyen terme**

### **3.2.1) Questions Transversales**

- 1) Requalification et/ou renforcement des compétences des citoyens de tous âges dans les pays de l'UA et de l'UE, afin de leur permettre de tous tirer parti de l'innovation et des technologies et de lutter contre l'apparition de nouvelles inégalités ou l'augmentation des discriminations existantes, en ciblant les ODD 8-9-13. [1,3,4] < C, E >

### **3.2.2) Santé Publique**

- 1) Assurer le transfert de technologies ainsi que l'amélioration et la mise au point de vaccins, de médicaments et de technologies de la santé de qualité, afin d'éviter les pénuries et de garantir le caractère abordable, la disponibilité et l'accessibilité pour les personnes dans le besoin, tout en garantissant une répartition équitable entre les zones géographiques. [1] < B, C >

### **3.2.3) Transition Écologique**

- 1) Encourager les applications numériques et les technologies vertes afin de donner une impulsion à la production agroécologique, à la transformation et à la consommation d'une alimentation saine et durable, et en concevant conjointement avec les acteurs du système alimentaire des solutions numériques pour la production, la transformation et la commercialisation afin de soutenir une transition durable et agroécologique. [2] < B,C, E >
- 2) Développer en Afrique des carburants renouvelables dans un monde en mutation pour atténuer le changement climatique. [1,2] < B >

### **3.2.4) Capacités Scientifiques**

- 1) Promouvoir des diplômes communs de master et de doctorat entre les universités de l'UA et de l'UE et soutenir la mobilité inclusive des étudiants, des chercheurs et du personnel en s'appuyant sur les programmes existants (tels que les actions Marie Skłodowska-Curie) afin d'accroître le nombre de futurs chercheurs et d'innovateurs qui se déplacent librement entre les deux régions, tout en limitant les risques de fuite des talents. [3,4] < C, E >
- 2) Soutenir la création d'un environnement STI propice aux écosystèmes d'innovation durable grâce à des feuilles de route de spécialisation intelligente afin de renforcer la culture de l'innovation pour l'ensemble des acteurs de la « quadruple hélice », la base factuelle sur laquelle fonder la hiérarchisation des investissements en matière d'innovation

et les processus de gouvernance participative pour relever les défis de développement propres à chaque lieu. [3,4] < A, B, C, D, E >

### **3.3 Actions à long terme**

#### **3.3.1) Questions Transversales**

- 1) Exploiter pleinement le potentiel des sciences en promouvant la recherche en mettant particulièrement l'accent sur les jeunes, les femmes et la démographie, l'atténuation et la gestion des défis mondiaux (y compris ceux posés par le changement climatique et les risques naturels), afin de construire de meilleures sociétés et de créer un bien-être pour tous, dans les États membres et les régions membres de l'UA et de l'UE. [1, 2] < A, E >

#### **3.3.2) Santé Publiques**

- 1) Concevoir et mettre en œuvre des méthodes et des outils nouveaux et innovants pour contrer les futures menaces pour la santé dues à des agents pathogènes connus de longue date, émergents ou résistants aux antimicrobiens, et pour promouvoir une médecine unique et de précision, dans un environnement en mutation. [2] < B >

#### **3.3.3) Transition Écologique**

- 1) Améliorer l'écosystème d'innovation agricole afin de renforcer les capacités des acteurs à innover, y compris les organismes de recherche, à co-concevoir et à développer la technologie et l'innovation grâce à des approches multipartites, à mettre en place des réseaux thématiques en Afrique et à renforcer les relations pour les échanges de connaissances et d'expériences entre l'Europe et l'Afrique, à co-investir dans les jeunes pousses et l'agro-PME et dans leur écosystème, et surtout à renforcer la capacité à élaborer des politiques d'innovation proactives. [2,3] < A, B, C, D, E >

#### **3.3.4) Innovation et Technologie**

- 1) Renforcer et faciliter un accès inclusif et abordable à des infrastructures de recherche et d'innovation d'envergure mondiale dans les pays de l'UA et de l'UE, afin qu'ils puissent jouer pleinement leur rôle de pôles de recherche et d'innovation et de «phares» pour l'ensemble des continents. [3,4] < A, B, E >
- 2) Veiller à ce que la transformation numérique soutienne la diffusion des connaissances, par exemple en favorisant la connexion avec le cloud européen pour la science ouverte. [3,4] < A, B, C, E >

#### **3.3.5) Capacités Scientifiques**

- 1) Fournir un soutien spécifique pour mieux rapprocher la recherche et l'innovation dans les pays de l'UA et de l'UE en favorisant l'émergence de nouveaux centres d'excellence et/ou en renforçant les centres d'excellence existants, notamment pour les jeunes chercheurs africains et européens, tout en soutenant les chercheurs de haut niveau en créant des «instituts d'études avancés» («collèges») réunissant des chercheurs de l'UA et de l'UE en résidence, dans le cadre d'appels à propositions ciblant des sujets transversaux. [1,4] < A,C>
- 2) Moderniser et renforcer les systèmes de recherche et d'enseignement supérieur, tant dans les pays de l'UA que dans les pays de l'UE, étant donné que des écosystèmes d'innovation efficaces, durables et efficaces ne peuvent prospérer en l'absence de systèmes de recherche et d'enseignement supérieur fondés sur l'excellence, la qualité, l'inclusion, l'ouverture, la transparence et le mérite. [3] &a, b, c, e'

## **4. SUIVI ET ÉVALUATION**

Les actions susmentionnées seront intégrées dans un cadre opérationnel selon une approche progressive et souple, à la suite de l'approbation de l'Agenda Innovation UA-UE. Cela permettra de réexaminer en temps utile la mise en œuvre de l'agenda et offrira la possibilité de corriger ou de réorienter sa mise en œuvre sur une base factuelle solide, en fonction des enseignements tirés.

La mise en œuvre des actions sera étroitement alignée sur le suivi de la mise en œuvre des politiques des deux parties, y compris l' « approche globale de la recherche et de l'innovation » et l'agenda 2063 de l'UA, ainsi que la politique STISA 2024 de l'UA. L'approche sera fondée sur la méthodologie de suivi axé sur l'impact des projets/programmes de R&I<sup>14</sup>. Elle tiendra compte de critères de référence pertinents, tels que l'impact obtenu, par exemple, sur la sécurité alimentaire, sur l'adaptation au changement climatique et sur l'atténuation de ses effets, sur l'amélioration de la fourniture de services de santé et sur la création de nouveaux débouchés commerciaux.

Le suivi global du processus de suivi et d'évaluation sera assuré par le HLPD UA-UE sur les STI afin de permettre à la Commission européenne, ainsi qu'à la CUA et à l'AUDA-NEPAD, d'interagir avec les principaux acteurs qui seront associés au suivi des réalisations de l'Agenda Innovation UA-UE.

---

<sup>14</sup> Élaboré par EVAL-Health, dont AUDA-NEPAD était membre d'un consortium, financé par le 7e Programme Cadre

## **ANNEX 1: SUMMARY**

## AUC

	Implementing Organ & Partners	Networking	Capacity-Building	Technology Transfer	Incubation	ACTIVITIES
<b>Innovating Education in African Expo 2018</b>	AUC-ESTI EU, GiZ, ADEA, Global e-Schools and Communities Initiative (GeSCI), Ashoka, UNICEF, and UNESCO	○	○	○	○	Established in 2018 as a flagship program of the Department of ESTI aimed at bringing together various stakeholders on the continent to identify, promote and scale promising Education Innovations in Africa.
<b>African Union Research Grant 2018</b>	AU, EC and co-funded by implementing institutions	○		○	○	Since the 2018 launch on Food Nutrition Security and Sustainable Agriculture, climate change and fisheries
<b>African Union Kwame Nkrumah Scientific Excellence Awards 2009</b>	AU, EC		○		○	To recognize top African researchers for their scientific achievements and discoveries, promoting efforts to transform scientific research into sustainable development in the continent
<b>African Outer-Space Flagship 2016</b>	AUC, African Space Agency, Germany, China, and France, UNECA, African Association for Remote Sensing for Environment (AARSE), AfricaGIS and African Leadership Conference (ALC)	○	○	○	○	Guided by the Space Policy and Strategy and promoting stakeholders' engagement and resulted into National Space Agencies committing their efforts to the implementation of the African Space Program

	Implementing Organ & Partners	Networking	Capacity-Building	Technology Transfer	Incubation	ACTIVITIES
<b>GMES &amp; Africa Support Programme 2016</b>	AUC, EC	○	○	○	○	Strengthening Africa's Earth observation system through the development of data and infrastructure, outreach and awareness raising
<b>The African Scientific Research and Innovation Council (ASRIC) 2018</b>	AU-STRC	○	○	○	○	Established as a specialized technical advisory body of the Commission to promote scientific research and innovation to address the challenges of Africa's socio-economic development
<b>Mapping national innovation systems (NIS) to strengthen the linkages between actors ?</b>	AU-AOSTI, AU MS, REC <sub>s</sub>	○	○	○	○	To measure and provide STI data, statistics, indicators and related policy analyses to the AU member states and STI stakeholders for evidence-based policymaking in Africa
<b>Developing STI indicators to feed the implementation of Agenda 2063 ?</b>	AU-AOSTI, AU MS, REC <sub>s</sub>	○	○	○	○	To provide decision makers and STI stakeholders with the needed data and indicators on government budget allocations for R&D by socioeconomic objectives, % GDP expenditures to knowledge production and aspects of innovation and intellectual property in Africa
<b>STI indicators to support M&amp;E of the implementation of STISA 2024 ?</b>	AU-AOSTI, AU MS, REC <sub>s</sub>	○	○	○	○	An indicator framework comprising thirty-three indicators divided into five result areas: (1) investment in knowledge, (2) generation of knowledge; (3) innovation; (4) policy environment, and (5) effects and impact of STI was developed.

## AUDA-NEPAD

Ongoing STI initiatives under AUDA-NEPAD Centres of Excellence included)

	Implementing Organ & Partners	Networking	Capacity-Building	Technology Transfer	Incubation	ACTIVITIES
<b>Coalition for African Research and Innovation (CARI) 2017</b>	AUDA-NEPAD, AAS/AESA, RECs, AU MS, BMGF, Wellcome Trust, NIH/USA	○	○	○	○	Build a highly coordinated, well-funded and African-led platform to improve systematic collaborations and scale up resources for African Science Technology & Innovation (STI) to achieve outcomes that would help more Citizens lead better lives sooner.
<b>Agricultural Technical Vocational Education and Training (ATVET) for Women (Skills Initiative) 2018</b>	AUDA-NEPAD, RECs, AU MS	○	○	○	○	Promote technical vocational education and training in the agriculture sector (ATVET) in support of the Comprehensive Africa Agriculture Development Programme (CAADP)
<b>African Medicines Regulatory harmonization (AMRH) for AMA 2010-2011</b>	AUDA-NEPAD, AUC, WB, BMGF, WHO, RECs & AU-MS	○	○	○	○	Ensure that African people have access to essential medical products and contribute to the improved regulation of medicines, medical products and technologies is equally timely and critical.
<b>Tuberculosis and Health Systems Support Project (HIV/AIDS, TB and Malaria), <u>Health Research and Innovations</u> 2016</b>	AUDA-NEPAD, WB, ECSA-HC, RECs & AU-MS	○	○	○	○	Strengthening Southern Africa Tuberculosis and Health Systems to support targeting interventions in the mining communities, transport corridors and cross-border areas.
<b>African Union Smart Safety Surveillance (AU-3S) 2020</b>	AUDA-NEPAD, WB, BMGF, RECs & AU-MS, MHRA/UK	○	○	○	○	Strengthen the safety surveillance of priority medical products across the African continent to address limited health system and safety surveillance capacity across Africa – through efficiencies like technological innovation, pooling of resources, and work sharing.

ACTIVITIES						
	Implementing Organ & Partners	Networking	Capacity-Building	Technology Transfer	Incubation	
<b>Science, Technology, Engineering, and Mathematics (STEM) Education</b> CPA, 2006		○	○	○	○	Accelerate Science, Technology, Engineering, and Mathematics (STEM) Education in Africa
<b>African Science, Technology and Innovation Indicators (ASTII) Initiative</b> 2007	AUDA-NEPAD, AUC, RECs, AU-MS and related STI institutions, Lund University, UNESCO, Sida, Globalics/Africalics, ACTS, ATPS, AfDB, UNECA & UNU-MERIT, FCDO & ABC Brazil	○	○ 43 AU-MS	○	○ 12 AU-MS	<ul style="list-style-type: none"> <li>• Develop and adopt indicators of STI internationally compatible;</li> <li>• Strengthen human capacities and institutional for the indicators of STI and other related studies;</li> <li>• Enable African countries to participate in international programs STI indicators; and</li> <li>• inform African countries on the state of STI in Africa.</li> </ul>
<b>Africa Union High-Level Panel on Emerging Technologies (APET-Platform)</b> 2016	AUDA-NEPAD, AUC, RECs, AU-MS, BMGF	○		○	○	Harness both existing and emerging innovations and technologies for the economic development of Africa
<b>Calestous Juma Executive Dialogue (CJED-Platform)</b> 2016	AUDA-NEPAD, AUC, RECs, AU-MS, BMGF	○	○	○	○	Provide capacity strengthening for senior policy and decision-makers through the exchange of knowledge and national experiences, networking, experiencing diversity and building mutually beneficial relationships with a focus on harnessing innovation and emerging technologies suitable for the sustainable socio-economic development of African countries in the 21st century.
<b>African Biosafety Network of Expertise (ABNE)</b> 2008	AUDA-NEPAD, AUC, RECs, AU-MS, MSU/USA, BMGF	○	○	○	○	Fulfill the recommendation of the High-Level African Panel on Modern Biotechnology – Freedom to Innovate (Juma and Serageldin, 2007) as a Continent-wide service network that has buy-in from African governments (Biosafety for Food Systems and Empowerment of Rural areas)
<b>Integrated Vector Management (IVM)</b> 2016	AUDA-NEPAD, AUC, RECs, AU-MS, MSU/USA, BMGF, GVF Open Philanthropy	○	○	○	○	Establish and operationalize a continental platform enabling the continent to build a strong collaboration between the health sector and others to effectively control vectors. To equip the region in the application of existing approaches & those that are on the horizon for controlling vectors.
<b>AUDA-NEPAD Centre of Excellence in Science, Technology and Innovation (AUDA-NEPAD CoE-STI)</b> 2021	AUDA-NEPAD, Council for Scientific and Industrial Research (CSIR) and Stellenbosch University (SU)	○	○	○	○	Upscale and commercialise home-grown innovations on the continent.

Following the re-clustering of the AUDA-NEPAD Programme Portfolio, new programmes and projects are only planned, incubated, and implemented following an assessment that would have been conducted on each of the portfolio areas to identify gaps.

## REGIONAL ECONOMIC COMMUNITIES (RECs)

It is believed that each of the following REC shall have its own STI Desk to coordinate regional programmes/projects in collaboration with other organs:

- 1) **Arab Maghreb Union (UMA)**
- 2) **Common Market for Eastern and Southern Africa (COMESA)**
- 3) **Community of Sahel-Saharan States (CEN-SAD)**
- 4) **East African Community (EAC).** There is the East African Science and Technology Commission (EASTECO) with the following:
  - a. Support for Evidence-Based policies (STI and IP Policies, and Innovation-led Bioeconomy Strategy)
  - b. Promotion of STI knowledge and Innovation (STI Journal, Cooperative grants Initiative, STI Forum, Regional Research Initiative)
  - c. Application of STI for Social Economic Development (eHealth & Telemedicine, eHealth readiness and regional health interoperability, Enhancement of Manufacturing and industrial technologies access and diffusion)
  - d. EASTECO Online Projects (RTO Portal, Bioeconomy Portal and STI Journal)
  - e. Conference
- 5) **Economic Community of Central African States (ECCAS)**
- 6) **Economic Community of West African States (ECOWAS):** The West African region had the ECOWAS Policy on Science and Technology (ECOPOST) targeting the R&D spending as percentage of GDP to 1% by 2020.<sup>15</sup>
- 7) **Intergovernmental Authority on Development (IGAD)**
- 8) **Southern African Development Community (SADC):** Southern Africa and DRC forming the SADC region has the Protocol on STI of 2008<sup>16</sup>. The implementation of the Protocol is assessed by the SADC Reference Group on STI Indicators: ADC Secretariat, ASTII Programme (AUDA-NEPAD), AOSTI (AUC), UNESCO and key member States. The STI Desk under the Directorate of Industrial Development and Trade (IDT) pursues the STI goals and objectives of the region found in the Regional Indicative Strategic Development (RISDP). The SADC STI Desk handles the following<sup>17</sup>:
  - a. The Development of Science, Technology and Innovation (Strengthening of regional cooperation; Development and harmonisation of policies; - Intra- and inter-regional cooperation; development of research capacity in key areas; Promotion of technology development, transfer and diffusion; and Support to public understanding of science and technology).
  - b. Regional Imperative of Cooperation on Science, Technology and Innovation
  - c. Domestication of the SADC Protocol on STI
  - d. Implementation Framework to Support Climate Change Response (Observation and monitoring; Impacts, vulnerability, and risks; Adaptation; and Mitigation).

## ACTIVITIES

							
<b>Africa-Europe Innovation Partnership (AEIP)</b> 2019-2021 € 2,000,000							A pilot initiative of DG RTD, implemented between 2018 and 2021, to explore, develop and test new collaboration mechanisms in the domain of innovation between Africa and Europe.
<b>ENRICH in Africa</b> 2021-2023 € 3,500,000							Follow-on of AEIP, aiming for a viable network of EU and AU incubators, accelerators, strengthening their capacities to boost local innovation landscapes as well as providing cutting edge value to entrepreneurs and innovators.
<b>EU Advisory Group</b> 2021 € 1,000,000 R&I INCO SF24							Expert groups to prepare policy reports, including recommendations for a longer-term vision of an EU-AU innovation policy
<b>Africa Initiative</b> 2021 € 350,000,000							36 topics under Calls for Proposals that are particularly relevant for cooperation with Africa reflecting the joint priorities as agreed at the EU-AU Research & Innovation Ministerial meeting in July 2020

ACTIVITIES						
						
<b>European and Developing Countries Clinical Trials Partnership (EDCTP)</b> 2014-2027 € 1,400,000,000						
<b>Food, Nutrition and Sustainable Agriculture Partnership (FNSSA)</b> 2017-2027 € 710,000,000						
<b>Climate Change and Sustainable Energy Partnership (CCSE)</b> 2017 - 2025 € 106,000,000						

EDCTP is a public-public partnership between 14 European and 16 African countries, supported by EU. EDCTP's vision is to reduce the individual, social and economic burden of poverty-related infectious diseases affecting sub-Saharan Africa by accelerating the development of new or improved medicinal products for the identification, treatment and prevention of infectious diseases.

The partnership address the challenges set out in UN Sustainable Development Goal 2 by stimulating joint AU-EU R&I activities for an initial period of 10 years.

The focus of the CCSE Partnership is on climate action for adaptation & mitigation, renewable energy and energy efficiency. Aim to deliver on internal and global political commitments of both continents and address the SDGs in supporting a transition to low-carbon and climate resilient economies

ACTIVITIES						
						
<b>African Research Initiative for Scientific Excellence Pilot Programme (ARISE PP)</b> 2020 € 25,000,000						<p>The aim of the programme is to fund research teams of 40 African Scientists' from 40 African countries hosted within a University or research institution.</p>
<b>BIC AFRICA - African Business Incubator Communities</b> 2021-2025 € 3,000,000						<p>Implemented by the 'European Business and Innovation Centre Network'.</p>
<b>Research and Innovation for Agricultural and Food Systems Transformation in Developing Countries (DESIRA)</b> 2017 – 2020 € 340,000,000						<p>Joint designing of innovation with local actors based on science and other source of knowledge to change behaviours, skills and agricultural/managerial practices; strengthening innovation support services including advisory services.</p>
<b>Value Chain Analysis for Development (VCA4D Project)</b> 2016-2022 € 20,000,000						<p>VCA4D performs value chain analyses (VCAs) across a range of agricultural commodities and countries in order to appraise their contribution to growth and job creation, taking into account the sustainability and inclusiveness of these value chains (VC).</p>

## ACTIVITIES

						
<b>Capacity for Nutrition (C4N)</b> <div style="background-color: black; color: white; padding: 2px 5px;">           2019 - 2024            € 19,300,000         </div>						
<b>Knowledge and Research for Nutrition (NRF)</b> <div style="background-color: black; color: white; padding: 2px 5px;">           2019-2024            € 6,588,500         </div>					<p>The Programme aims at creating a Regional Network where incubators will be established/consolidated in Angola, Ethiopia, Madagascar, and Somalia</p>	<p>Under C4N “innovation fund” innovative (research) initiatives are funded</p>
<b>#Smart Development Fund (#SDF)</b> <div style="background-color: black; color: white; padding: 2px 5px;">           2020 – 2022            € 20,000,000         </div>						<p>Support the design, the monitoring, the evaluation and the learning in relation to policies and programmes for better nutrition outcomes in low- and middle-income countries.</p>
<b>Digital financial solutions in ACP countries</b> <div style="background-color: black; color: white; padding: 2px 5px;">           2020-2024            € 14,500,000         </div>						<p>The overall objective of the #SmartDevelopmentFund is to refine digital solutions to counter COVID-19 challenges in and with the EU partner countries. The expected result of the programme is the development, scale-up and promotion of innovative digital solutions, supporting EU partner countries’ response to COVID-19.</p>
						<p>Managed by the United Nations Capital Development Fund (UNCDF) to unlock the potential of digital finance to benefit more than 600,000 women, youth and entrepreneurs. Support key policy reforms for digital transformation as well as create inclusive financial services tailored to the needs of women and youth, including innovative savings products and credit. The joint action will be implemented in different countries in Africa (Gabon, Niger, Malawi and Ethiopia)</p>

	ACTIVITIES					
	Networking	Capacity-Building	Technology Transfer	Incubation	Knowledge Triangle	Fin. Support for Business Creation
<b>Marie Skłodowska-Curie Actions (MSCA)</b> <b>Innovative Training Networks (/Doctoral Networks)</b> <b>RISE (/Staff exchanges)</b> <b>Individual Fellowships (Postdoctoral Fellowships)</b> <div style="background-color: #1a237e; color: white; padding: 5px; display: inline-block;">           2021 - 2027            €         </div>						
<b>HEInnovate</b> Discussions are currently underway about the possibility of extending the <div style="background-color: #1a237e; color: white; padding: 5px; display: inline-block;">           2021-2027            €         </div>						
<b>EIT-HEI pilot Initiative (eit-hei.eu) to Africa (TBD)</b> <div style="background-color: #1a237e; color: white; padding: 5px; display: inline-block;">           2021 – 2027            €         </div> <b>EIT (TBD)</b> Discussions are underway about the possibility of including Africa among the priorities of the EIT global strategic orientations						

MSCA support researchers in all scientific domains, promote collaboration between the academic, scientific and business communities, boost the careers of scientists at all stages and develop excellent doctoral training in Europe and beyond through inter-sectoral and international mobility

HEInnovate (HEI) is a self-reflection tool for Higher Education Institutions who wish to explore their innovative potential. It guides you through a process of identification, prioritisation and action planning. The HEI Initiative help higher education institutions to build the capacity to innovate and to teach innovation and entrepreneurship.

The EIT's Knowledge and Innovation Communities are partnerships that bring together businesses, research centres and universities. They allow:

- innovative products and services to be developed in every area imaginable, including climate change, healthy living and active ageing;
- new companies to be started;
- a new generation of entrepreneurs to be trained;

Several KICs (EIT-Climate KIC, EIT Raw Materials KIC and EIT Food KIC) are engaging with Africa already and we plan on encouraging the KICs to share practices with Africa in the coming period

ACTIVITIES					
 Networking	 Capacity-Building	 Technology Transfer	 Incubation	 Knowledge Triangle	 Fin. Support for Business Creation
<b>Digital Education Action Plan (TBD)</b> <b>2021 – 2027</b> <b>€</b>					

The Plan supports **the development of a high-performing digital education ecosystem**. This includes infrastructure, connectivity and equipment; planning and development; teachers and staff training; learning content, tools and secure platforms. It also focusses on **enhancing basic and advanced digital skills and competences** and literacy; computing; data-intensive technologies, and ensuring that women are equally represented in digital studies and careers.

ACTIVITIES						
						
<b>Erasmus+</b>  2021 – 2027 570,000,000 for Sub-Saharan Africa and approx. 60% share of 335 M EUR for South Med region						
<b>HAQAA 2</b>  2019-2022 € 5,000,000						
<b>HAQAA 3</b>  2022-2025 TBD						

Erasmus+ aims at enhancing skills, competences and employability of students and staff in Africa, of African higher and vocational education institutions; reinforcing capacities, quality, innovation and relevance for the labour market and society; and increasing cooperation of institutions and exchange of good practices between Europe and Africa.

Aims to improve the quality and harmonisation of African higher education through notably the use of the African Standards and Guidelines for Quality Assurance in higher education (ASG-QA) in universities and by external QA agencies, support to the establishment of the Pan-African Continental Accreditation Agency and building up the capacity for informed and evidence-based policy making for higher education at continental level, linked to regional and national capacity and support to the HE cluster of the Continental Education Strategy for Africa 2016\_2025

ACTIVITIES						
						
<b>OACPS Research and Innovation Programme</b>  2020-2025 € 60,000,000	Internet Governance / support to African countries	Support to implementation of the Digital Transformation Strategy				The Innovation fund supports innovation ecosystems, transfer of knowledge and technology, networking and sharing experiences.
<b>PRIDA – Policy and Regulation Initiative for Digital Africa</b>  2021-2023 € 8,000,000	Monitoring and Evaluation of Harmonization strategy in digital on African continent	Rationalization of Spectrum utilization (in connection with ITU)				3 components: Policy support facility, Innovation Fund and R&I Hub. Activities comprise Coordination and Support Actions and Innovation Actions under H2020

DG INTPA/EACEA

**Intra-Africa Mobility Programme**2016 - 2020  
€ 30,000,000

Organisation and implementation of student mobility in high quality master and doctoral programmes and academic/administrative staff mobility, as well as the provision of education/training and other services to foreign students and teaching/training and research assignments and other services to staff from the countries covered by the project.

## ACTIVITIES

						
<b>ICT58/Digital Innovation</b>  2021-2024 € 11,000,000 (4 projects launched in early 2021, including the AEDIB/NET, already closely collaborating with the R&I AEIP project)	<b>African-EU Networking academy between Africa and Europe</b>  <b>DIGILOGIC Networking incubators / Logistic industry</b>  <b>IDEAD4D-Hub &amp; D4DHUB</b>	<b>AEDIHB project</b>  Reinforcement of African Innovation ecosystems	<b>AEDIHB Project</b>	<b>AEDIHB project /</b> matchmaking between innovation actors of Africa and EU to reinforce African innovation ecosystems	<b>HUBiquitous project /</b> Knowledge triangle & Training / Entrepreneurs-IT- synergic training	<b>AEDIHB project</b>

Activities comprise Coordination and Support Actions and Innovation Actions under H2020

## JRC

<b>Diagnostic and benchmarking study of the technology transfer ecosystems of the Southern neighbourhood</b>  2019 - 2021 € 150,000						
<b>FPCA Food Price Crowdsourcing Africa</b>  2019 - 2021 € 200,000	With external support of Wageningen and ITA - Nigeria	Support to implementation of the Digital Transformation Strategy	Finalized to have a "turnkey project" able to be transferred/duplicated in different contexts	Finalized to improve makers transparency, fair competitions, better definition of food security policy	Involvement of a large range of stakeholders: from farmer to final consumer, from market operators to policy makers	The project cover a gap in the services market which could be covered by new private/public companies

It identified strengths and weaknesses of the ecosystems and provided tailored policy recommendations for the countries

Provides a complementary methodology to gather real-time and very spatial/temporal detailed food price data along the food chain and for better definition of food security

ACTIVITIES						
<b>Innowwide programme</b>  2019 - 2021 € 9,000,000 from H2020 (120 VAP financed, around 10 of which in Africa)	(between the EU SME and a partner in the target location)					Main aim was to support internationalisation of EU SMEs (only), on the basis of small 'Viability Assessment Grants' worth 60.000 EUR each  The second phase of Innowwide is expected to be integrated in the Eurostars programme of Eureka, with a budget of 25 MEUR
EIB						
<b>Boost Africa</b>  180 MEUR divided into 120 MEUR senior tranches, 50 MEUR junior tranches, expected to mobilise an additional 300 MEUR from venture capitalists and IFIs						EIB cooperation with African Development Bank. The components of the programme comprise an investment programme, a technical assistance pool, and an
NEAR						
<b>Strengthening Innovation and Start-up Ecosystems across North Africa (Southern Med)</b>  2022 – 20 ? Call for proposals to be launched in 2022 € ?	TBD	TBD	TBD	TBD	TBD	Based in two pillars: 1) sustaining start-up ecosystems; 2) support clusters' ecosystems. Work at different levels: 1) by adopting macro- support on policy reforms, 2) supporting business organisations (with training, capacity building, etc.) 3) and through demonstration of results

## ANNEX 2: SUMMARY OF NEEDS AND GAPS

This section provides an overview of the main current needs and gaps identified by AU and EU policy makers and the innovation communities of both sides, as explained in chapter 2: objectives. The needs and gaps are identified around 5 areas: **A) The innovation ecosystem, B) Innovation management, C) Knowledge exchange, including technology transfer, D) Access to financial resources, and E) Human capacity development.**

### A. The innovation ecosystem

- Need for a joint AU-EU innovation strategy, plan or program: Note was taken of the many past and current innovation programmes across the two continents, involving numerous AU and EU projects and programmes by various institutions (bilateral or multilateral). However, there is very limited to no coordination and communication between relevant AU-EU innovation projects at continental or regional level.
- Need for stronger involvement of players outside the traditional R&I communities, such as development cooperation partners was also noted, despite the relative size of the programmes of both areas.
- Need for systematic interaction between researchers, policymakers, business and civil society representatives, and other stakeholders in view of the uptake of research findings for commercialisation to be increased and for better use by the civil society and policy makers (*also from FNSSA mapping*).
- Need to strengthen human resources capacities, for instance with regard to specialists jobs and governmental structures, dedicated to translating technological know-how into market valorisation (from the lab to the market).
- Need for strengthening the scientific advisory capacities of Science Academies as independent think tanks and knowledge institutions, and reinforce the science-policy interface and thus the uptake of scientific advice provided to policy makers. This could include e.g. the harmonisation of regulations at continental level around technology and innovation on IPR, standards, data protection, and payment interoperability (in the context of the African Continental Free Trade Agreement/AfCFTA).
- Need to integrate the knowledge triangle concept across strategic alliances and partnerships between existing and future AU and EU R&I cooperation programmes, including the need to integrate women and youth in STEM actions could significantly contribute to sustainable growth and jobs.
- Need to reduce/reverse brain drain of young, talented African researchers, who carry out their studies abroad and, for instance due to a lack of performing research infrastructures, do not have the opportunity to continue their research in their home destinations. In this context, how major emerging countries transformed the brain-drain into a brain-gain has important lessons for the AU.
- Need to engage the African diaspora in Europe for knowledge exchange for development of technical expertise in Africa.
- The EU –AU partnership must deal with a larger geopolitical context. Other important G20 countries are also important actors on the African continent. A strategic analysis of their objectives and actions in Africa is needed.

### B. Innovation Management

The gap between research experts and grass root innovators must be reduced for innovation to spur the achievement of the Sustainable Development Goals, but to achieve this, the following needs should be addressed:

- Need to foster entrepreneurship, career guidance and employability, innovation management, and social innovation (e.g. concepts of more active citizenship).

- Need for systematic interaction between researchers, policymakers, innovators and other stakeholders in view of the entrepreneurship support and uptake of research findings for policy and society to be more actively promoted, supported and implemented.
- Need for tailor-made advice and support from experienced professionals for entrepreneurs, SMEs e.g. in the agri-business/food systems and energy sectors, in order to create successful initiatives to foster collective innovation to develop strong value chains..
- Need to encourage policymakers to open public procurement to start-ups and entrepreneurs, and to encourage open innovation cooperation with the private sector.
- Need to strengthen human resources capacities, for instance regarding specialists' jobs and governmental structures, dedicated to translating technological know-how into market valorisation (from the lab to the market).
- Need for possibilities and methodologies for AU and EU policy makers to trial innovative technologies or approaches in practice, e.g. by creating regulatory sandboxes or support policy hackathons in areas such as health, finance, agriculture, energy, cities, climate adaptation should be encouraged.

### C. Knowledge Exchange, including Technology Transfer

Recognise the differences between Technology Transfer Organisations (TTO) in the EU and AU regarding their modus operandi (some of which are hybrid organisations, which for instance combine traditional TT with incubators). Needs identified include:

- Need to enhance the relationships between TTOs, tech hubs, and project coordinators to increase the local/regional/international exchange between them, to facilitate translating research outcomes into private sector implementation (*also from FNSSA mapping, and upcoming from CCSE*).
- Need to promote technology transfer through joint actions in relevant fields, e.g. logistics, renewable energy, sustainable forestry, seafaring, circular economy, health technologies, digital, agriculture, agro-processing and agro-ecology, green hydrogen and climate services for risk reduction, green hydrogen.
- Need to strengthen the overall innovation and IP protection (governance framework), and supporting universities and research centres in developing appropriate policies and procedures for identifying, protecting and managing IP, interacting with the private sector, with spin-off companies and with early-stage investors.
- Need to support local and national authorities to develop technology transfer related support mechanisms like Proof of Concept and technology transfer funds.
- Need for the implementation of frugal innovation programmes.

### D. Access to financial resources

In comparison to e.g. American and Asian markets, R&I performers and innovators in the EU and AU experience a more limited access to financial resources. Therefore, needs identified include:

- Need a repository of available funding opportunities for innovation to be translated into tangible results, presented in conjunction with capacity building sessions for relevant innovators.
- Need the development of a joint EU-AU scheme to support innovation in priority. This could support technology demonstration projects, early-stage entrepreneurs, applied research and knowledge exchange platforms.

- Need to strengthen existing R&I funding instruments, and promote the establishment of new, flexible funding programmes at bilateral, regional and international levels, while also diversifying funding partners.
- Need for financial support to scaling up R&I project outcomes, and transform them into successful entrepreneurial ventures, like start-ups, and related infrastructure, normally requiring important investments (*also from FNSSA mapping study, and upcoming from CCSE*)).
- Need private capital and corporations to play their important role in maintaining an innovation ecosystem (e.g. by attracting early stage and corporate investors to local innovation ecosystems to support the growth and expansion of spin-off companies or absorb generated IP through licensing).
- Need to stimulate investment in knowledge synthesis and translation and link R&I to standardisation, with a view to support commercialisation of research findings as well as strengthen the evidence-base in policymaking..
- Need targeted support to private companies in their attempts to invest in Africa and mainly in research and innovation cooperation between European and African companies (small and medium enterprises) on a lower tech and innovation level.
- Strengthen joint intra-Africa higher education, research and innovation programmes, in support of building knowledge economies and reinforce economic diversification.
- Strengthen link with Green Climate Fund and Adaptation Fund for climate-resilient pathways.

## **E. Human capacity development**

Differences in the capacities between AU and EU innovation players (universities, research institutions, incubators, accelerators, investors, venture capitalists, private equity firms, governments), and approaches, combining capacity empowerment and enabling environment upgrading, need to be taken into account, together with respecting principles of a just transition approach. Specific needs include:

- Need for improving mobility and training of students, staff and researchers (for instance through Erasmus+ and the Marie Sokolowski-Curie Actions), cooperation, transformation and innovation capacities of higher education institutions, research and innovation management capacities, science communication capacities, STEM and social sciences capacities, e.g. on the basis of teaming and twinning activities (e.g., involving the European University Alliances and consortia from the Intra-Africa Academic Mobility Scheme).
- Need to develop and strengthen the research capacities of African Universities.

## **ANNEX 3: RESULTS OF THE PILOT MAPPING OF THE EU-AU R&I PARTNERSHIP ON FOOD AND NUTRITION SECURITY AND SUSTAINABLE AGRICULTURE**

The **EU-AU R&I Partnership on Food and Nutrition and Sustainable Agriculture Partnership (FNSSA)**, with its more than 300 joint projects, was chosen for the implementation of a **pilot<sup>18</sup>**, aiming to identify the most promising projects with the highest business potential, warranting further investments for their potential to be fully reaped. This analysis was done based on a deeper understanding of (i) **the scale of the business potential** and (ii) **the exact needs of identified projects** that, once addressed (e.g. through ad-hoc investments, technical assistance, etc.), would allow such projects to leap over the next step of innovation and reach the marketplace.

In future, the pilot will be extended to other priorities namely Public Health, including the European and Developing Countries Clinical Trials Partnership<sup>19</sup> and the EU-AU R&I Partnership on Climate Change and Sustainable Energy. Secondly, this exercise will take the form of a rolling exercise, becoming a lasting part of the AU-EU Innovation Agenda throughout its implementation period.

The needs identified during this pilot have been integrated in the 5 areas presented in annex II. Below you will find the list of projects that have the **highest business potential** out of an initial selection of 34 projects for each of the four priority areas of the 2016 roadmap<sup>20</sup> of the EU-AU R&I Partnership on FNSS, as well as **investment strategies and measures** adequate to their needs.

- 1) In the priority area of **sustainable intensification**, seven projects were identified as being top. The assessment of their potential and needs is identified below.

**DualCassava:** Dual-resistant cassava for climate resilience, economic development and increased food security of smallholders in eastern and southern Africa (21) – **Score: 1.95.** (Funded through “African Union Research Grant II”)

*Some of the information below comes from an interview held with the project coordinator, Maruthi Gowda, on December 7, 2021.*

### **a. Potential:**

- The project has proven its potential to enhance farmers' resilience to drought and crop disease, and to increase business opportunities in the poultry feed manufacturing sector and others.
- The project has introduced drought mitigation mixed cropping techniques of maize and cassava, together with a newly developed cassava variety that is both drought- and disease-resistant. The implementation covered local maize farmers in a sample of districts in Malawi and Tanzania. A Randomized Controlled Trial (RCT) carried out by the researchers showed that the introduced technique increases farmers' resilience to adverse shocks, their revenue, their investment, and their households' dietary diversity.

---

<sup>18</sup> Full pilot available on:

[https://ec.europa.eu/info/sites/default/files/research\\_and\\_innovation/events/documents/final\\_report\\_fnssa.pdf](https://ec.europa.eu/info/sites/default/files/research_and_innovation/events/documents/final_report_fnssa.pdf)

<sup>19</sup> [Home - EDCTP](#)

<sup>20</sup> [EU-Africa FNSSA roadmap | European Commission \(europa.eu\)](#)

- The project has also introduced cassava as a partial substitute for the more expensive maize in the poultry feed manufacturing industry. This has led to 17% increases in profit for feed manufacturers and 27% increases in revenues for cassava farmers, as well as creating a new business opportunity for the latter [please mention the opportunity within brackets: “(i.e. development of a novel poultry feed; possibility of using cassava in the bakery, paper and starch transformative value chain industries)”). Moreover, the project coordinator believes that cassava could also be introduced as a raw material in the bakery, paper, and starch industries.
- The project has therefore the potential to produce a durable impact in terms of socioeconomic opportunities for African farmers, feed manufacturers, and other entrepreneurs and workers across agricultural and food systems’ value chains. As an evident side-effect, it is also promising in terms of food security and poverty alleviation. Moreover, the project has potential to produce a positive environmental impact, since the substitution of imported maize shortens distribution chains, and the introduction of disease and drought-resistant cassava varieties mitigates the impact of climate change and reduces the need for pesticides.

**b. Needs and next steps:**

- Additional funding is needed to carry out an array of activities necessary for the scale up. These activities include supplying the new cassava varieties to local entrepreneurs, as well as technical training to local farmers to equip them with mixed cropping methodologies and capacity to multiply the seeds. Some infrastructure is also needed for this to happen, including chipping machines, vehicles and laboratories. This would also allow to enhance seed transformation/processing value chains.
- Awareness among farmers in drought-prone areas, as well as among feed manufacturers, should be generated. Additionally, training for farmers on mixed-cropping techniques, as well as training for feed manufacturers, needs to be provided. Moreover, the improved cassava varieties need to be introduced in the national seed systems. To scale up in the bakery, paper and starch industries, there is a need to mentor and encourage? private sector partners to invest in appropriate processing and drying technologies.
- As I commented in the previous version of the report, there still no specific need concerning one of the externality generated by the project, that of cassava residues being commercialised to poultry breeders. Could you please clarify what has emerged from the interview(s) to be needed in order to render this venture more widespread and systemic, and by doing so increase revenues for traders and access to poultry feed for producers?

**Crop and Soil Health Improvement** for Sustainable Agricultural Intensification towards Economic Transformation in West Africa (19) – **Score: 1.58.** (Funded through “DG INTPA”)

*Some of the information below comes from an interview held with the project coordinator, Eric Danquah, on November 29, 2021.*

**a. Potential:**

- The project is promising in terms of sustainably intensifying agricultural output and creating new business and employment opportunities.

- The project has introduced improved varieties of crops (rice, maize and tomato) to local farmers. Moreover, it provides extensive training to value chain actors and farmers through field schools and workshops. This leads to a sustainable increase in local agricultural productivity (between 20% and 80% depending on the crop) and output, as well as an increase of farmers' revenue (30%-40%). Additionally, good agronomic practices and pest management strategies have been taught and implemented.
- New product developments have already started, such as SHITOR, a cowpea-based product that is expected to increase this commodity's demand. This creates new agribusiness opportunities and increases the value-added of this industry. Moreover, the developed maize, tomato and cowpea varieties may be patentable and, therefore, possible to commercialise or license. As part of this project, the West Africa Centre for Crop Improvement (WACCI) has already released 3 maize hybrids and is in the process of getting approval for 3 new tomato varieties. Several companies are already interested in the maize hybrid.
- The project has therefore the potential to create business and employment opportunities for local farmers by increasing productivity and income in an environmentally sustainable manner. Therefore, it is also promising in terms of food security and poverty alleviation. Additionally, the project achieves this economic impact in an environmentally friendly way, since the productivity increases and the associated income rises are a consequence of the introduction of improved varieties and the use of soil health management techniques.

**b. Needs and next steps:**

- The complete scale up would take 3 to 5 years.
- The Farmers Field School initiated through the project could be expanded to include a much higher number of farmers and further spread good agronomic practices and the introduction of improved varieties. The same is true for the Value Chain Workshops organised during the project, which could be enlarged to include all actors in the value chain and combined with entrepreneurship training. This should include both public and private sector involvement.
- New crop varieties could be released to the market, this will create opportunities for the licensing of intellectual property and their commercialization, translating into business and employment opportunities. The project is already working with an agribusiness start up (Legacy Crop Improvement Centre, Koforidua, Ghana) to start raising private funds for the large-scale production of certified seeds of the developed maize hybrids. The coordinator expects an uptake of the improved maize varieties by 40% of Ghana's farmers in 5 years-time and the national government has shown interest in exploring the possibility of subsidizing certified seed production. Moreover, WACCI has reached an agreement with a tomato processing company to produce the developed tomato varieties at a large scale and the developed variety is expected to be the dominant one in the market in 2 to 3 years-time.
- For this scale up to happen, some specialized assistance and funding is needed. Technical assistance in developing a business plan and support in creating links with partners and investors to facilitate the generation of start-ups would be greatly beneficial. Moreover, funding of between €3million to €5million is deemed necessary during for the next 5 years to expand the impact, create cooperatives and establish support systems for farmers. These new funds would also support the creation of start-ups and businesses (e.g. seed companies, commercial seed producers, farmers' cooperatives, food processing companies, etc.) and the marketing of cowpea-based products. Additionally, the plant varieties created need to be scaled-up to be commercialized

**UPSCALERS:** Upscaling Site-Specific Climate-smart Agriculture and Land use practices to Enhance Regional Production Systems in West-Africa (20) – **Score: 1.43.** (Funded through “African Union Research Grant II”)

*Some of the information below comes from an interview held with the project coordinator, Seyni Salack, on December 2, 2021.*

**a. Potential:**

- The project is promising in terms of sustainably intensifying small-scale farming and increasing resilience to climate change.
- The project increases small-scale farmers yields and revenues. It is estimated that labour productivity is increased by a 100% and land productivity by a 200%. This is thanks to the development of a user-friendly app with customized climatic forecasts for farmers' fields, the construction of several facilities for farmers to use, the identification of sustainable intensification pathways (soil quality improvements, compost production, biogas reuse, etc.), and training to farmers on agroclimatic techniques. The estimated increase of farmers' household income is of 50-52%.
- The project is also promising in its capacity to improve government's agricultural policy. The development of decision-making tools for climate-smart policies and the training of national extension officers on the delivery of agroclimatic information to farmers are expected to further improve agricultural output and resilience to climate change.
- Moreover, the project also increases agricultural production resilience to climate change. By delivering customized climatic information and training farmers on agroclimatic techniques, it has been possible to significantly enhance productivity despite the very adverse conditions of the 2018-2020 crop seasons.
- Therefore, the project is promising in terms of creating economic opportunities for small-scale farmers, and in terms of improving food security. The project can sustainably increase agricultural output and improve climate change resilience at the same time, therefore ensuring a stable future food production.

**b. Needs and next steps:**

- Firstly, customized climate information services are scalable by the weather services of all countries. Technical assistance for the distribution of these customized climatic information services would be needed. This will take an additional 3 years in order to develop a concept of operations for the agroclimatic services. The team aims to reach at least 500 farmers by (end of?) next year (2022).
- Moreover, the intensification pathways can be implemented at larger scale. For example, the production of compost for farmers is a scalable practice. The team aims to distribute at least 20 more biodigesters next year (2022).
- They will need funding to maintain the centralised interconnected app system once the project officially ends. Moreover, the scale up of the project would require additional financing (~450,000€).

**Promote sustainable management of *Tuta absoluta*, an invasive pest of Solanaceous vegetables for food and nutritional security in East Africa (13) – Score: 1.21.** (Funded through “African Union Research Grant II”)

**a. Potential:**

- The project has potential in the sustainable intensification of agricultural output through the environmentally sensible management of pests.
- The project has developed new Integrated Pest Management (IPM) technologies and has disseminated it to tomato farmers for the sustainable management of *Tuta absoluta* in Kenya, Tanzania and Uganda. This has increased agricultural productivity (and quality) by mitigating the infestations. The increase in productivity has positively impacted farmers’ income, both in amount and stability. Moreover, as the output increases and the cost decreases, new business and employment opportunities have been created in value chain processes.
- The project is therefore promising in terms of creating economic opportunities for farmers and in improving food security by increasing agricultural yields. Moreover, IPM technologies have also allowed for a more sustainable agriculture by significantly reducing the use of pesticides and fostering a good equilibrium of the ecosystem, for example by allowing the activities of pollinators.

**b. Needs and next steps:**

- The project needs starter kits for farmers to further disseminate the developed IPM technologies. Moreover, in the medium term, financial assistance would be needed to upscale the IPM dissemination to other regions and countries.

**PASUSI:** Participatory Pathways to Sustainable Intensification. Innovation platforms to integrate leguminous crops and inoculants into small-scale agriculture and local value chains (49) – **Score: 1.15.** (Funded through “ERA-NET Cofund, LEAP-Agri”)

*Some of the information below comes from an interview held with the project coordinator, John Sumelius, on December 20, 2021.*

**a. Potential:**

- The project is promising with regards to the sustainable intensification of agricultural output, the increase of resilience to climate change and the improvement of women’s position in society.
- The project is expected to reduce production costs and increase productivity of legume farms. The identification of the most economically viable crops and practices has led to the introduction of inoculated soybean production and land rotation techniques. This has led to cost reductions and increase yields. Moreover, indirect economic opportunities could be generated if the volume of inoculants is scaled-up and a market is formed. Some strains of rhizobia and soybeans have already been patented in Ghana and Uganda.
- The project has therefore the potential to reduce legume farmer poverty, improve soil quality and increase resilience to climate change. Moreover, given the fact that women make up most of the workforce in this area, the improved economic opportunities could

lead to an increase in the economic independence of local women. Additionally, two women innovation platforms have been created.

**b. Needs and next steps:**

- The project and/or its outputs can be scaled-up by solving information problems within the governance systems that currently block farmers from transforming their systems. For this to happen, additional funds would be needed.

**EcoAfrica:** ECOlogical intensification pathways for the future of crop-livestock integration in AFRICAn agriculture (17) – **Score: 1.06.** (Funded through DG INTPA)

**a. Potential:**

- The project has the potential of increasing crop production in a sustainable manner, as well as improving food security as a result.
- The project uses innovative techniques (e.g. pest-mitigating cropping system, high-quality organic fertilizers, etc.) to sustainably intensify production while protecting soil properties at the same time. This has led to increases in agricultural yields and in farmers' revenue. Cost reductions have also been observed by using plants with insecticide characteristics that allow for a reduction in the purchase of fertilizers and pesticides. Additionally, several upland rice varieties tested during the project are in the process of being registered.

**b. Needs and next steps:**

- The project and/or its outputs could be scaled-up through nationwide programmes. For this to happen, technical and logistical assistance would be needed in order to diffuse the techniques developed and to target the most suitable areas for exploitation. To do so, the team would need to work with lots of farmers to collect a large amount of biomass for recycling (biogas, organic fertilizer, etc.). Furthermore, it will also need equipment to generate these products.

**MAB Chicken:** Marker-assisted breeding of selected native chickens in Mozambique and Uganda (8) – **Score: 1.01.** (Funded through “African Union Research Grant II”)

*Some of the information below comes from an interview held with the project coordinator, Filomena dos Anjos, on December 9, 2021.*

**a. Potential:**

- The project is promising in terms of a sustainable intensification of chicken meat and egg production.
- The project has improved native chicken ecotypes and developed feed based on scavengeable resources. This was introduced to farmers in Mozambique and Uganda. These new chicken breeds are more productive and of better quality (meat and eggs), this will improve the economic opportunities of farmers and ameliorate the living conditions of rural communities. The project will create business and employment opportunities in the hatchery sector, day-old brooded chicks' industry and in mother units and communal incubators. Moreover, it may lead to the development of a scavengeable feed industry. The chicken breeds may be patentable.

- The project is therefore promising in terms of economic development. Additionally, the production increase is sustainable because semi-intensive production is promoted. Besides, the project can have a positive impact in women's standing in society. Since this activity is mostly carried out by women, an increase in their productivity could increase their economic independence.

**b. Needs and next steps:**

- Nationwide programmes in Uganda and Mozambique that helped to introduce improved chicken varieties are needed. Some progress has already taken place in Uganda, as the chicken breeds have started to be transferred to farmers. Nonetheless, Mozambique has not begun yet.
- In order to implement these programmes, government commitment and NGO support is needed, as well as additional funding.
- The project would need support to conduct future steps in several fronts: (a) it will need technical assistance to develop a business plan and to be mentored on intellectual property management, (b) it will need support in accessing markets, (c) women groups will need some type of assistance (funds for egg incubators, feed, vaccines and other components).

In the priority area of **agriculture and food systems for nutrition**, two projects were identified as being top. The assessment of their potential and needs is identified below.

**EatSANE:** Education and Training for Sustainable Agriculture and Nutrition in East Africa (41) –  
**Score: 1.33.** (Funded through “ERA-NET Cofund, LEAP-Agri”)

**a) Potential:**

- The project has provided training for farmers on new cropping systems and practices. Moreover, they have established and developed value chains for green leafy vegetables.
- The project is therefore promising in creating new economic and business opportunities. The novel cropping systems has led to important productivity increases and to significant rises in farmers' income. Moreover, the new market avenues are now reachable to farmers, as these have started marketing dried vegetables and accessing more profitable markets thanks to the improved storage practices (i.e. solar drying).
- Furthermore, the project has a strong potential with respect to food security, as the practices developed lead to more nutritious food, reduces food losses and increases dietary diversity. In terms of sustainability, the project is also promising since the new cropping systems prevent soil erosion and biodiversity losses.

**b) Needs and next steps:**

- The project's outputs could be scaled up by diffusing the techniques and novel cropping systems at a large scale. This will need permanent institutional support (e.g. extension officers). Disseminating best practices in an easy and understandable language is therefore key, and should target nutritional experts, rural advisors and extension officers.
- A stakeholders' board would be important to exchange information and diffuse the materials among all interested actors. If the project is to be scaled-up to other countries,

value chain and stakeholders' workshops are also key. Youth targeting must also be a priority.

- The scale up of the project would need financing in order to continue developing materials and scaling-up trainings.

**Enhancing nutritional quality of plantain food products** through improved access to endophyte primed and high pro vitamin A plantain cultivars under integrated soil fertility management practices in Nigeria, Cameroon and Gabon (12) – **Score: 1.06.** (Funded through “African Union Research Grant II”)

*Some of the information below comes from an interview held with the project coordinator, Masso Cargele, on November 30, 2021.*

**a) Potential:**

- The project has developed fertilisers and designed rates of fertilisation for plantain cultivation, what increases the crop's productivity and output. More importantly, several plantain-based products and processes have been developed. Among them, plantain flour with high provitamin A content, a new solar drying technology, and a new process for deep-fat frying starchy banana that leads to significant reductions in oil use.
- The project is therefore promising in creating new economic and business opportunities, as well as new markets. The project leads to important productivity increases in both plantain production (e.g. fertilisers) and processing (e.g. solar drying, deep-fat frying). Moreover, the new products developed create new market avenues for producers and other value chain actors (e.g. plantain flour).
- Furthermore, the project has a strong potential with respect to food and nutrition security, as the products developed with high provitamin A content easily cover the vitamin A requirements of pre-school children and pregnant women.

**b) Needs and next steps:**

- The project's outputs could be scaled up by diffusing the techniques at a large scale. The team has already developed a business plan to implement production and processing techniques by the youth. Nonetheless, seed systems are not well organised and this represents an obstacle for large-scale transfer. All value chain actors should be included in the expansion.
- The scale up of the project would need financing to bring the business plan into practice.
- The team believes that some outputs of the project can be patentable. Private involvement is needed for the production of endophytes.

In the priority area of **cross-cutting issues**, four projects were identified as being top. The assessment of their potential and needs is identified below.

**SafeFish:** Development of bacteriophage cocktails as disease biocontrol agents for improved aquaculture productivity, food and nutrition safety in Ghana and Uganda – **Score: 1.41.** (Funded through “African Union Research Grant II”)

*Some of the information below comes from an interview held with the project coordinator, Jesca Nakavuma, on November 29, 2021.*

**a) Potential:**

- The project is promising in terms of increasing food output and improving the environmental footprint of aquaculture.
- The project has developed phage cocktails that act as biocontrol for the management of bacterial pathogens in tilapias. This leads to fish mortality reductions of around 60% and output increases of 20%. Besides, phage cocktails are cheaper than the currently used antibiotics. The project is therefore promising in terms of creating business and economic opportunities for tilapia farmers by increasing productivity.
- The project has also potential with regards to food security and sustainability. The phage cocktail stabilises and increases food supply. Moreover, they do so by introducing ecologically harmless biocontrol technology, therefore reducing the environmental impact of aquaculture.

**b) Needs and next steps:**

- The project and/or its outputs could be scaled up by transferring the research output to fish feed manufacturers. Moreover, biocontrol technologies for other species could be researched.
- A new regulatory framework is needed to introduce the phage cocktail to the aquaculture sector. Public involvement is therefore needed.
- The team would need assistance in developing a business plan and managing intellectual property, as they have planned to patent the phage cocktail.
- The scale up would need funds in order to make the appropriate investments to develop the productive infrastructure needed.

**AFRICA-MILK:** Promote ecological intensification and inclusive value chains for sustainable African milk sourcing (46) – **Score: 1.32.** (Funded through “ERA-NET Cofund, LEAP-Agri”)

**a. Potential:**

- The project has developed agroecological dairy cows feeding practices and efficient dairy collection systems. Moreover, the team has created Dairy Innovation Platforms (DIPs) in each of the dairy processor networks involved. These platforms have directly involved women farmers into the discussion.
- The project is therefore promising in terms of food and nutrition security, as it is expected to increase access to safe dairy products in Kenya and Madagascar thanks to a better management of milk quality all along the dairy value chain.
- The project has also potential with respect to environmental sustainability, as products are produced with local milk and not imported powder milk, therefore shortening the distribution chain.
- Furthermore, the project may create local business and economic opportunities in the dairy industry based on fresh milk produced locally. The project leads to increased productivity and output, and reduced collection costs.

**b. Needs and next steps:**

- Some of the output of the project (i.e. *Jabnde*, a rationing software for African dairy cows) might be patentable and could be commercialised. Discussions are being held with the legal department of CARD in this respect.
- The project can be scaled-up by expanding the use of *Jabnde* to livestock technicians in charge of monitoring milk production on farms.
- The team would need assistance in implementing the organisational innovations (i.e. dairy collection systems).
- The scale up would need funds to make the appropriate investments to expand the practices and systems developed (~60,000€).

**SPEAR** (Empowering small-scale farmers): towards the SDGs through participative, innovative and sustainable livestock and poultry value chains (33) – **Score: 1.08**. (Funded through “ERA-NET Cofund, LEAP-Agri”)

**a. Potential:**

- The project has developed new ways of preserving milk and meat, protocols for participatory value chain modelling, and training modules.
- The project is promising in terms of economic development. The local cereal-based feed developed in Senegal is more affordable than the current solutions, what gives the possibility to more poultry farmers. Poultry farmers increase productivity and output as a result.
- The project also improves the environmental footprint by utilising locally grown cereals for feed manufacturing. With respect to food and nutrition security potential, the project improves access to nutritious food in Senegal and Kenya by the preservation of food and the increased nutritional values provided by including insect meals in Kenya.

**b. Needs and next steps:**

- For the project’s output to scale up at the national level, a Private-Public Partnership (PPP) will need to be created.

**Enhancing the nutrition and health of smallholder farmers in East Africa** through increased productivity of biofortified common bean and improved postharvest handling (11) – **Score: 1.08**. (Funded through “African Union Research Grant II”)

*Some of the information below comes from an interview held with the project coordinator, Pamela Paparu, on December 1, 2021.*

**a. Potential:**

- The project has the potential of reducing hunger, improving food and nutrition security and fostering responsible food production. The promotion of biofortified beans and pre- and post-harvest handling practices increases output and safety of the beans. This results in safer and more nutritious food.

- The project is also promising in terms of economic development. The bean variety is more productive and increases yields, therefore generating business opportunities for small-scale farmers. Moreover, row spacing and the use of selective herbicides allows for labour cost reductions.
- The project also improves the environmental footprint of bean production by promoting the safe use of pesticides thanks to row spacing, which reduces seed amount per acre.

**b. Needs and next steps:**

- For the project's output to scale up, the bean variety seeds should be diffused to allow for a large-scale multiplication of seed production. One farmer group has already taken over this task; however, they will need enhanced capacity to carry it out successfully. Moreover, they will need training in quality production and marketing. Additionally, farmers should be trained in the safe use of pesticides and on reducing post-harvest losses.
- Accordingly, the project will need technical assistance in planning future steps and developing a plan of action. Additional funding will also be needed.
- Farmers will need training and technical support to set up cooperatives and to establish the bean seeds production facilities.

In the priority area of **expansion and improvement of agricultural markets and trade**, one project was identified as being top. The assessment of its potential and needs is identified below.

**Implementation of Agroforestry Systems in S. Tomé and Príncipe** and development of non-wood forest products (NWFP) in Angola and S. Tomé and Príncipe to improve income-generation and food security (15) – **Score: 1.38.** (Funded through “African Union Research Grant II”)

*Some of the information below comes from an interview held with the project coordinator, María do Céu Madureria, on November 30, 2021.*

**a. Potential:**

- The project has the potential of expanding agricultural markets by opening new market avenues for the products created. The project developed three Non-Wood Forest-Products (NWFP) Chains (Foods & Aromatic Plants; Medicinal Plants; Mushrooms). Moreover, the team also developed new lines of healthier food and medicinal natural products.
- Furthermore, the project is promising in terms of environmental outcomes/ improvements. The team has implemented agroforestry techniques (AFS), rehabilitated degraded natural areas, and developed a Biological and Fair-Trade certification for all NWFP. These techniques have also been taught to small scale farmers and Ministry of Agriculture technicians. AFS techniques have allowed for an increase in output and productivity while maintaining quality and ensuring sustainability.
- The project therefore creates economic and business opportunities because it increases agricultural productivity through AFS and creates new market avenues by developing NWFPs and introducing mushrooms into national food markets. All of this while ensuring environmental protection and giving value to sustainable production by creating a Biological and Fair-Trade certification.

**b. Needs and next steps:**

- The project could be scaled up by expanding AFS to the whole national territory of Angola and S. Tomé and Príncipe, and by developing more lines of NWFP. The original plan was to locally market NWFP to international tourists. Nonetheless, given the situation derived from COVID-19, the team is focusing on commercialising the developed products on international markets. The Biological and Fair-Trade certification should be key part of this strategy.
- The project has already created seven micro-business groups that will implement AFS techniques and market the developed NWFPs. These groups need technical assistance in order to evolve into long-term sustainable companies. The team has already established contact with two incubators to benefit from their help in this respect.
- The scale up will need financing for these micro-business groups to succeed. Moreover, the team will need to create a network of partnerships to ensure the expansion of AFS to other territories (at national or regional level in Africa or even internationally?).
